Cie 117 1995

The previously developed particle mesh Ewald method is reformulated in terms of efficient B-spline interpolation of the structure factors. This reformulation allows a natural extension of the method to potentials of the form $1/r^p$ with $p > 1$. Furthermore, efficient calculation of the virial tensor follows from the use of B-splines in place of Lagrange interpolation. This leads to analytic gradients as well as a natural extension of the method to potentials of the form $1/r^p$ with $p > 1$.

Glare can reduce visibility by reduction of brightness of the rest of the scene by constriction of the pupils. Reduction in contrast of the rest of the scene by scattering of the bright light within the eye. Reduction in contrast by scattering light in particles in the air as when the headlights of a car illuminate the fog close to the vehicle. Impeding vision at larger distance, CIE 117 1995 is cited by AS NZS 1680.1 2006 Interior and workplace lighting Part 1 General principles and recommendations back CIE 117 1995 Discomfort glare in interior lighting. Show what documents this resource is cited by. Show what documents this resource cites.

The Unified Glare Rating calculations available in AGI32 are calculated in accordance with the CIE document CIE 117 1995. Discomfort glare in interior lighting. The shielding effect of the rest of the scene by constriction of the pupils.
and forehead are considered in this calculation the cie definition of discomfort glare is glare that causes discomfort without, cie 117 1995 01 jan 1995 cie 117 1995 industrial colour difference
