The Children's Sleep Habits Questionnaire (CSHQ) is a parent-report questionnaire designed to measure sleep behaviors in children aged 4 to 12. The 52-question test takes approximately 10 minutes to complete and has demonstrated good reliability and validity in measuring child sleep habits and problems. The CSHQ is a psychological questionnaire designed to measure sleep behaviors in children and adolescents ages 4-12. The 52-question test is filled out by the parent and takes approximately 10 minutes to complete. A score of 41 or higher indicates a sensitivity and specificity to sleep problems overall. A higher score on the CSHQ indicates more sleep problems for the child. The CSHQ yields both a total score and eight subscale scores reflecting key sleep domains that encompass the major medical and behavioral sleep disorders in this age group. The CSHQ has been used to screen for the most common sleep problems in school-aged children and was further translated and validated in several countries.

The American Thoracic Society (ATS) improves global health by advancing research, patient care, and public health in pulmonary disease, critical illness, and sleep disorders. Founded in 1905 to combat tuberculosis (TB), the ATS has grown to tackle asthma, COPD, lung cancer, sepsis, acute respiratory distress, and sleep apnea among other diseases. Other measures have been used to assess infant sleep problems, including the Infant Sleep Questionnaire (ISQ) and the Brief Infant Sleep Questionnaire (BISQ).
instruments do not base infant sleep problems in a standardized classification system of sleep disorders, the child sleep habits questionnaire cshq was developed in the us for measuring medical and behavioral sleep disorders in school aged children this study was conducted to assess the reliability and structural validity of the dutch version of the cshq questionnaires n 2385 were distributed to, one of the most commonly used sleep screening questionnaires for school aged children is the childrens sleep habits questionnaire cshq developed by owens et al the cshqs ubiquity is evidenced by its widespread use in both the research and the clinical community, sleep disorders in schoolchildren are a common problem worldwide and when are not adequately diagnosed and treated their negative impact on daytime functioning may be significant the aim of this study was to evaluate the psychometric properties of the spanish version of the children s sleep habits questionnaire cshq, sleep duration television and computer habits difficulties in sleeping and the effects all of these have on enjoyment of school and on feelings of tiredness in school in children and adolescents the secondary aim was to explore associations between television and computer habits and sleep problems method procedure, in addition to completing daily sleep diaries parents were asked to complete two structured questionnaires the childrens sleep habits questionnaire cshq owens et al 2000 and the parenting events questionnaire pe crnic amp greenberg 1990 on three occasions see fig 1, concurrent validity of the family inventory of sleep habits is demonstrated through correlations with the childrens sleep habits questionnaire cshq owens spirito amp mcguinn 2000 currently rated as promising this measure needs additional validation and use by other researchers, the childrens sleep habits questionnaire cshq has been used globally as a sound screening tool for sleep problems in children and it has been increasingly adopted in china however its psychometrical properties have not been examined among preschool aged chinese children, sleep difficulties in children with autism spectrum disorders are common with poor sleep hygiene a contributing factor we developed the family inventory of sleep habits to measure sleep hygiene in this population its validity and reliability in 2 groups of children aged 4 to 10 years those with a clinical diagnosis of autism spectrum disorders and those who are typically developing are, to validate the portuguese version of the children s sleep habits questionnaire cshq pt and compare it to the versions from other countries the questionnaire was previously adapted to the portuguese language according to international guidelines 500 questionnaires were delivered to the parents, study objectives to present psychometric data on a comprehensive parent report sleep screening instrument designed for school aged children the children s sleep habits questionnaire cshq yields both a total score and eight subscale scores reflecting key sleep domains that encompass the major medical and behavioral sleep disorders in this age group, author s personal copy screening and evaluation of sleep disorders in children and adolescents marsha luginbuehl phda william c kohler mdb one of the biggest pediatric health issues facing our country is the large number of, owens 2003 the national sleep foundation questionnaire 2006
