There has been a great deal of research into school choice and the education quasi market that has dominated compulsory school provision in the United Kingdom since the early 1980s. Much of this research fails to address the context in which processes of choice exist alongside the patterns and outcomes of choice and competition leading to considerable dispute within UK debates on the impact, choice in education. From the economic evidence we draw the following conclusions: 1. A successful choice policy would improve standards for most school students. On top of that, increasing school choice may mean that the working class gain and the middle class lose as the house price premium from living near a good school is reduced. 2. School choice shouldn’t be just for the wealthy. Educational options should not only exist for the well-connected and wealthy. While President Obama opposes school choice and props up the education affiliated labor unions, he sends his own children to a school that costs $30,000 per year. Though Obama likes to portray himself as having come from nothing, he attended the elite college prep. The ultimate answer is to end the government education monopoly and shift to a system based on choice and competition.
